

DATASHEET RW 309 LMO – MIG wire

Description and Applications

Austenitic stainless steel welding wire similar to RW 309 L except to the addition of 2,5 to 3,0 % of Mo in order to increase the pitting corrosion properties in chloride containing environments. It is primary used for surfacing of parent metals to improve their corrosion resistance. Also often used for buffer layers when cladding with a RW 316LAWS and for dissimilar joints with C, Mn and low alloy steels.
